Konstanz, 26 June, 2008

Novel Input Devices for Large, High-Resolution Displays Design, Interaction and Evaluation

Design of Input Devices: Lessons Learned

Laserpointer-Interaction as example:

- Design & configuration of filter techniques
 - Jitter-Compensation (in cooperation with Prof. Saupe)
 - Easy-Click
- Interactivity
 - Configuration dependent on user, context & environment
 - Highly interactive tools for iterative design process
- Reusability
 - Multi-Device Interaction
- Comparability
 - Controlled Test Environment
 - Interaction Logging

Design of Input Devices: Lessons Learned

Laserpointer-Interaction as example:

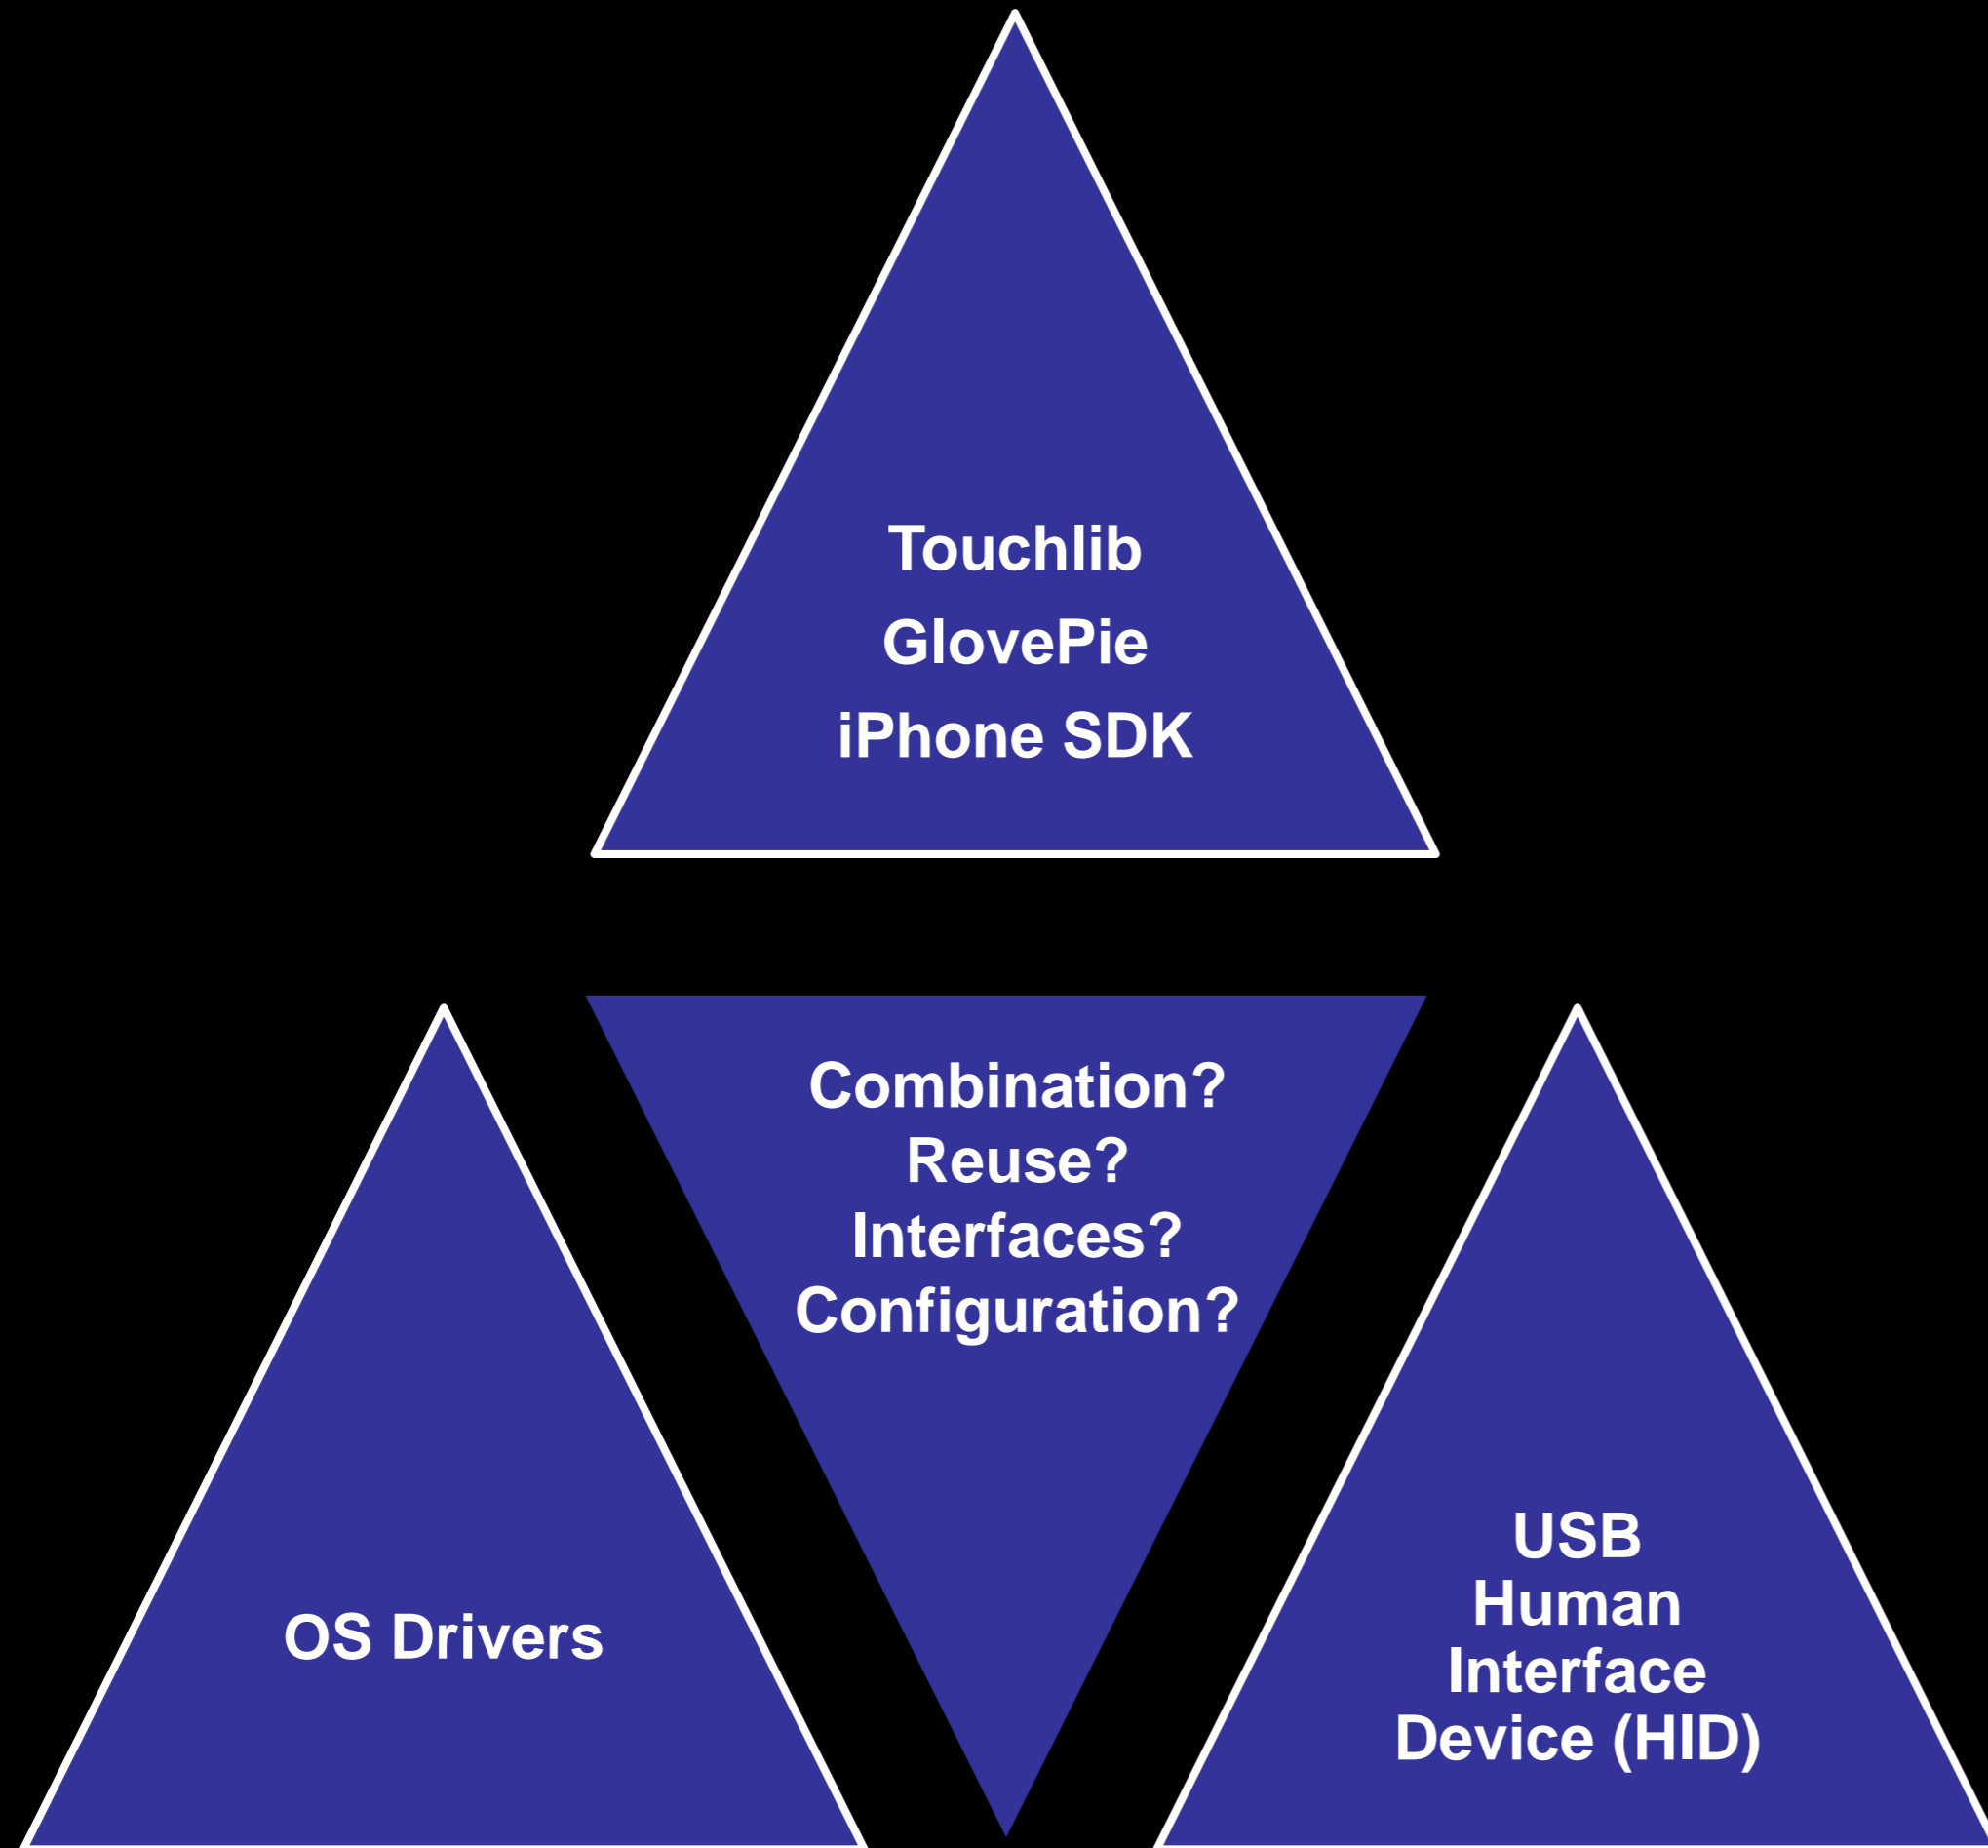

- Design & configuration of filter techniques
 - Jitter-Compensation (in cooperation with Prof. Saupe)
 - Easy-Click
- **Interactivity**
 - Configuration dependent on user,
 - Highly interactive tools for iterative
- **Reusability**
 - Multi-Device Interaction
- **Comparability**
 - Controlled Test Environment
 - Interaction Logging

How to fulfill these requirements?

Idea: common interaction library

Heterogeneity of Devices & Drivers

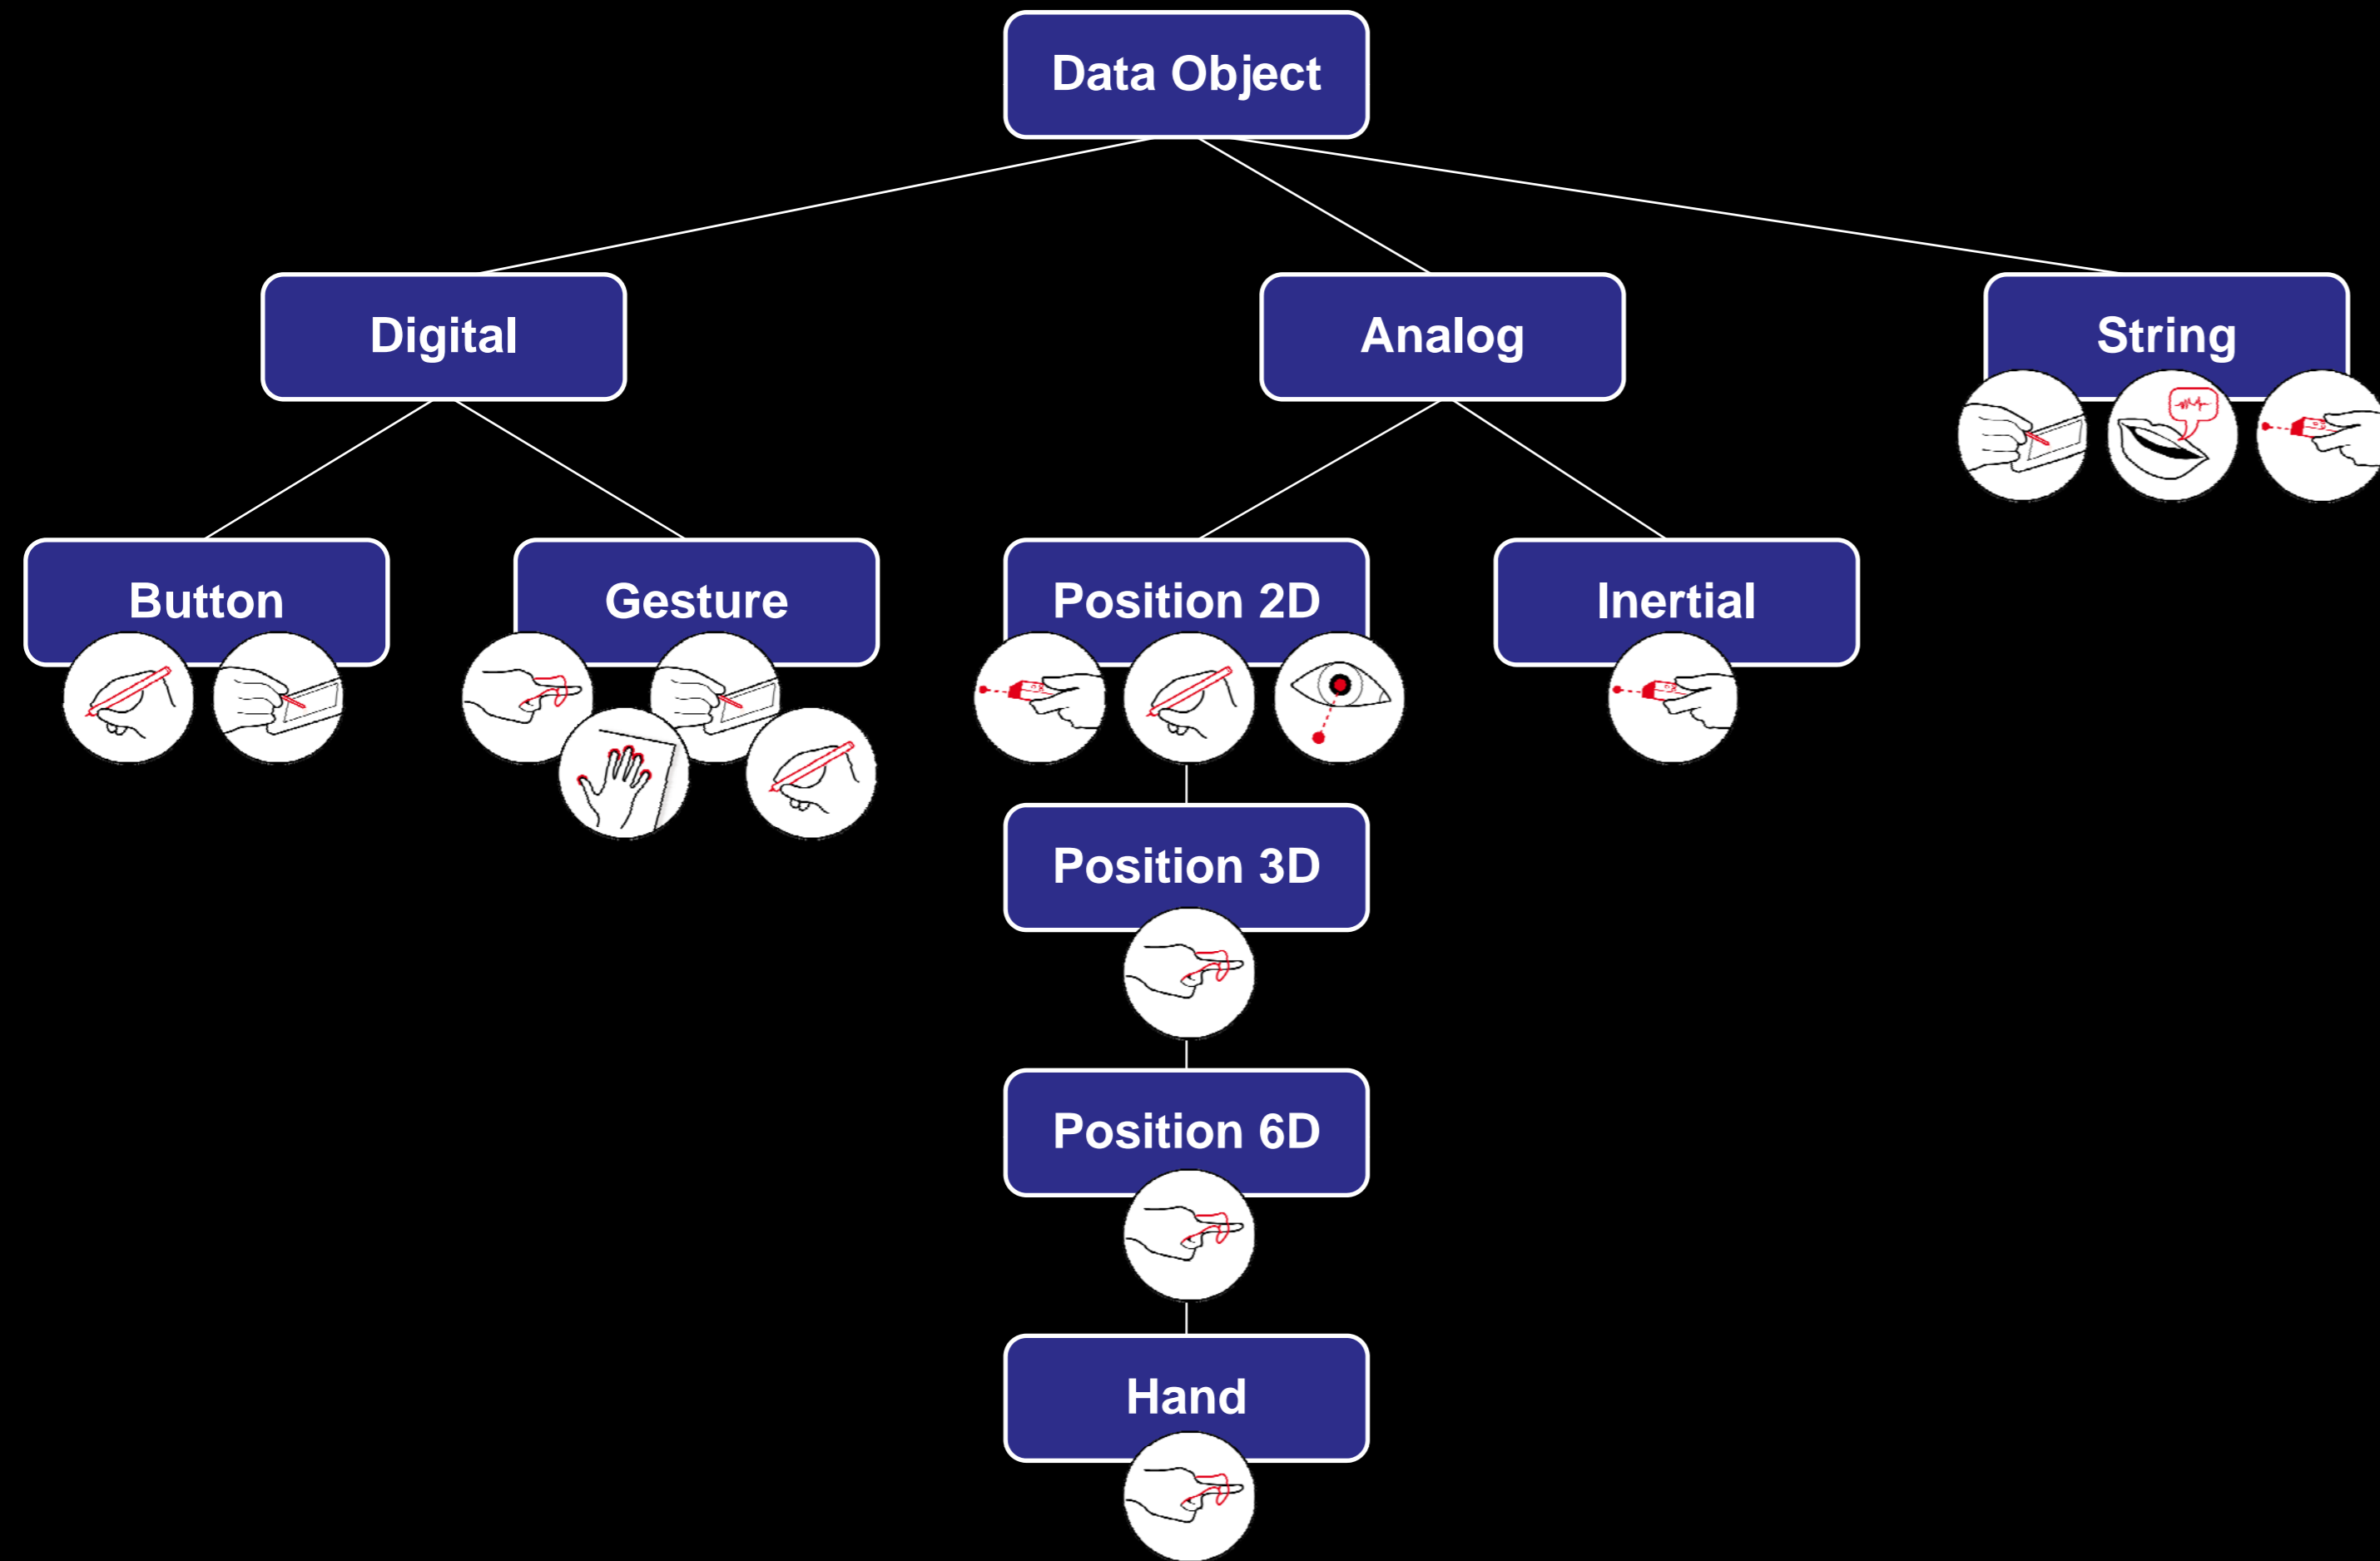

Classification of Input Devices

The Semantics of Graphic Input Devices, Victor L. Wallace, SIGGRAPH'76

| Device Type | Sampling Output | Event | Echo |
|-------------|-----------------|----------------------|---------------|
| Locator | Location | 1. Select 2. Edge | Cursor |
| Button | Identifier | Touch | Reinforcement |
| Pick | Reference | Hit | Reinforcement |
| Keyboard | Text + Cursor | Keystroke | Text |
| Valuator | Value | 1. Select 2. Edge | Numerals |

Apple iPhone SDK, <http://developer.apple.com/iphone/>
 Device Class Definition HID, <http://www.usb.org/developers/hidpage/>
 GlovePIE – Glove Programmable Input Emulator,
<http://carl.kenner.googlepages.com/glovepie>
 Touchlib – A Multi-Touch Development Kit, <http://nuigroup.com/touchlib/>

Data Type Hierarchy

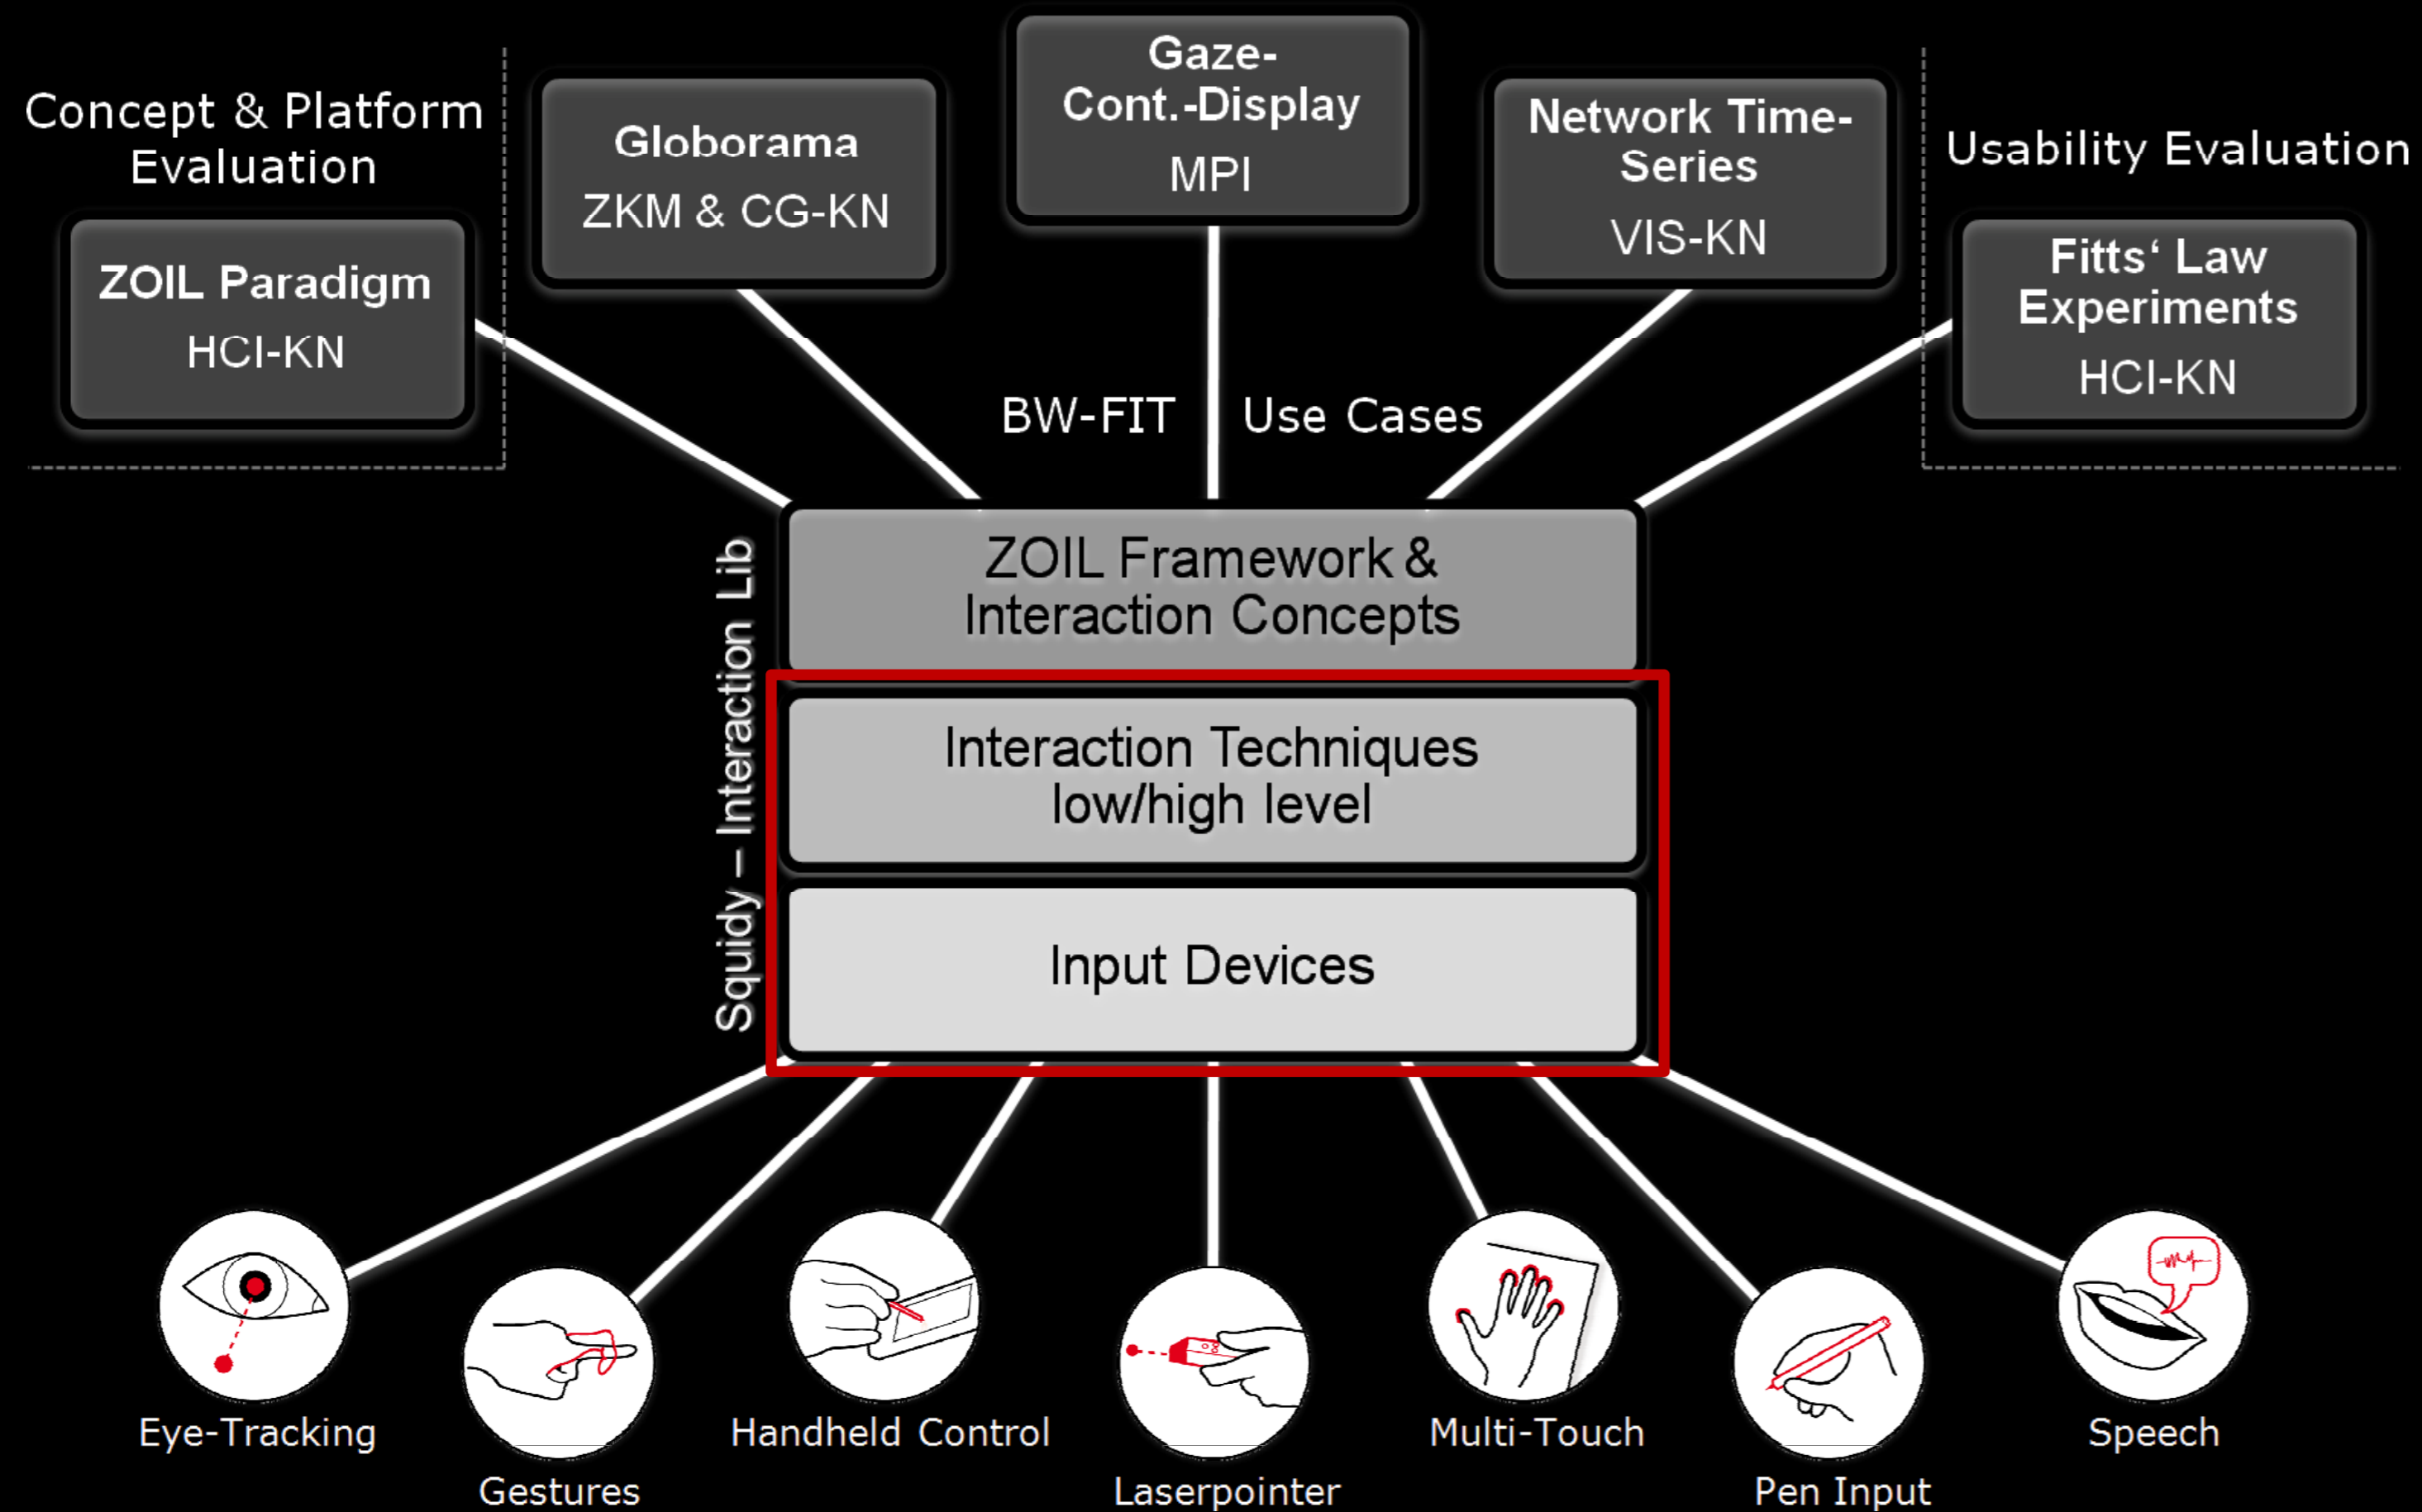

Classification of Input Devices

The Semantics of Graphic Input Devices, Victor L. Wallace, SIGGRAPH'76

| Device Type | Sampling Output | Event | Echo |
|-------------|-----------------|----------------------|---------------|
| Locator | Location | 1. Select 2. Edge | Cursor |
| Button | Identifier | Touch | Reinforcement |
| Pick | Reference | Hit | Reinforcement |
| Keyboard | Text + Cursor | Keystroke | Text |
| Valuator | Value | 1. Select 2. Edge | Numerals |

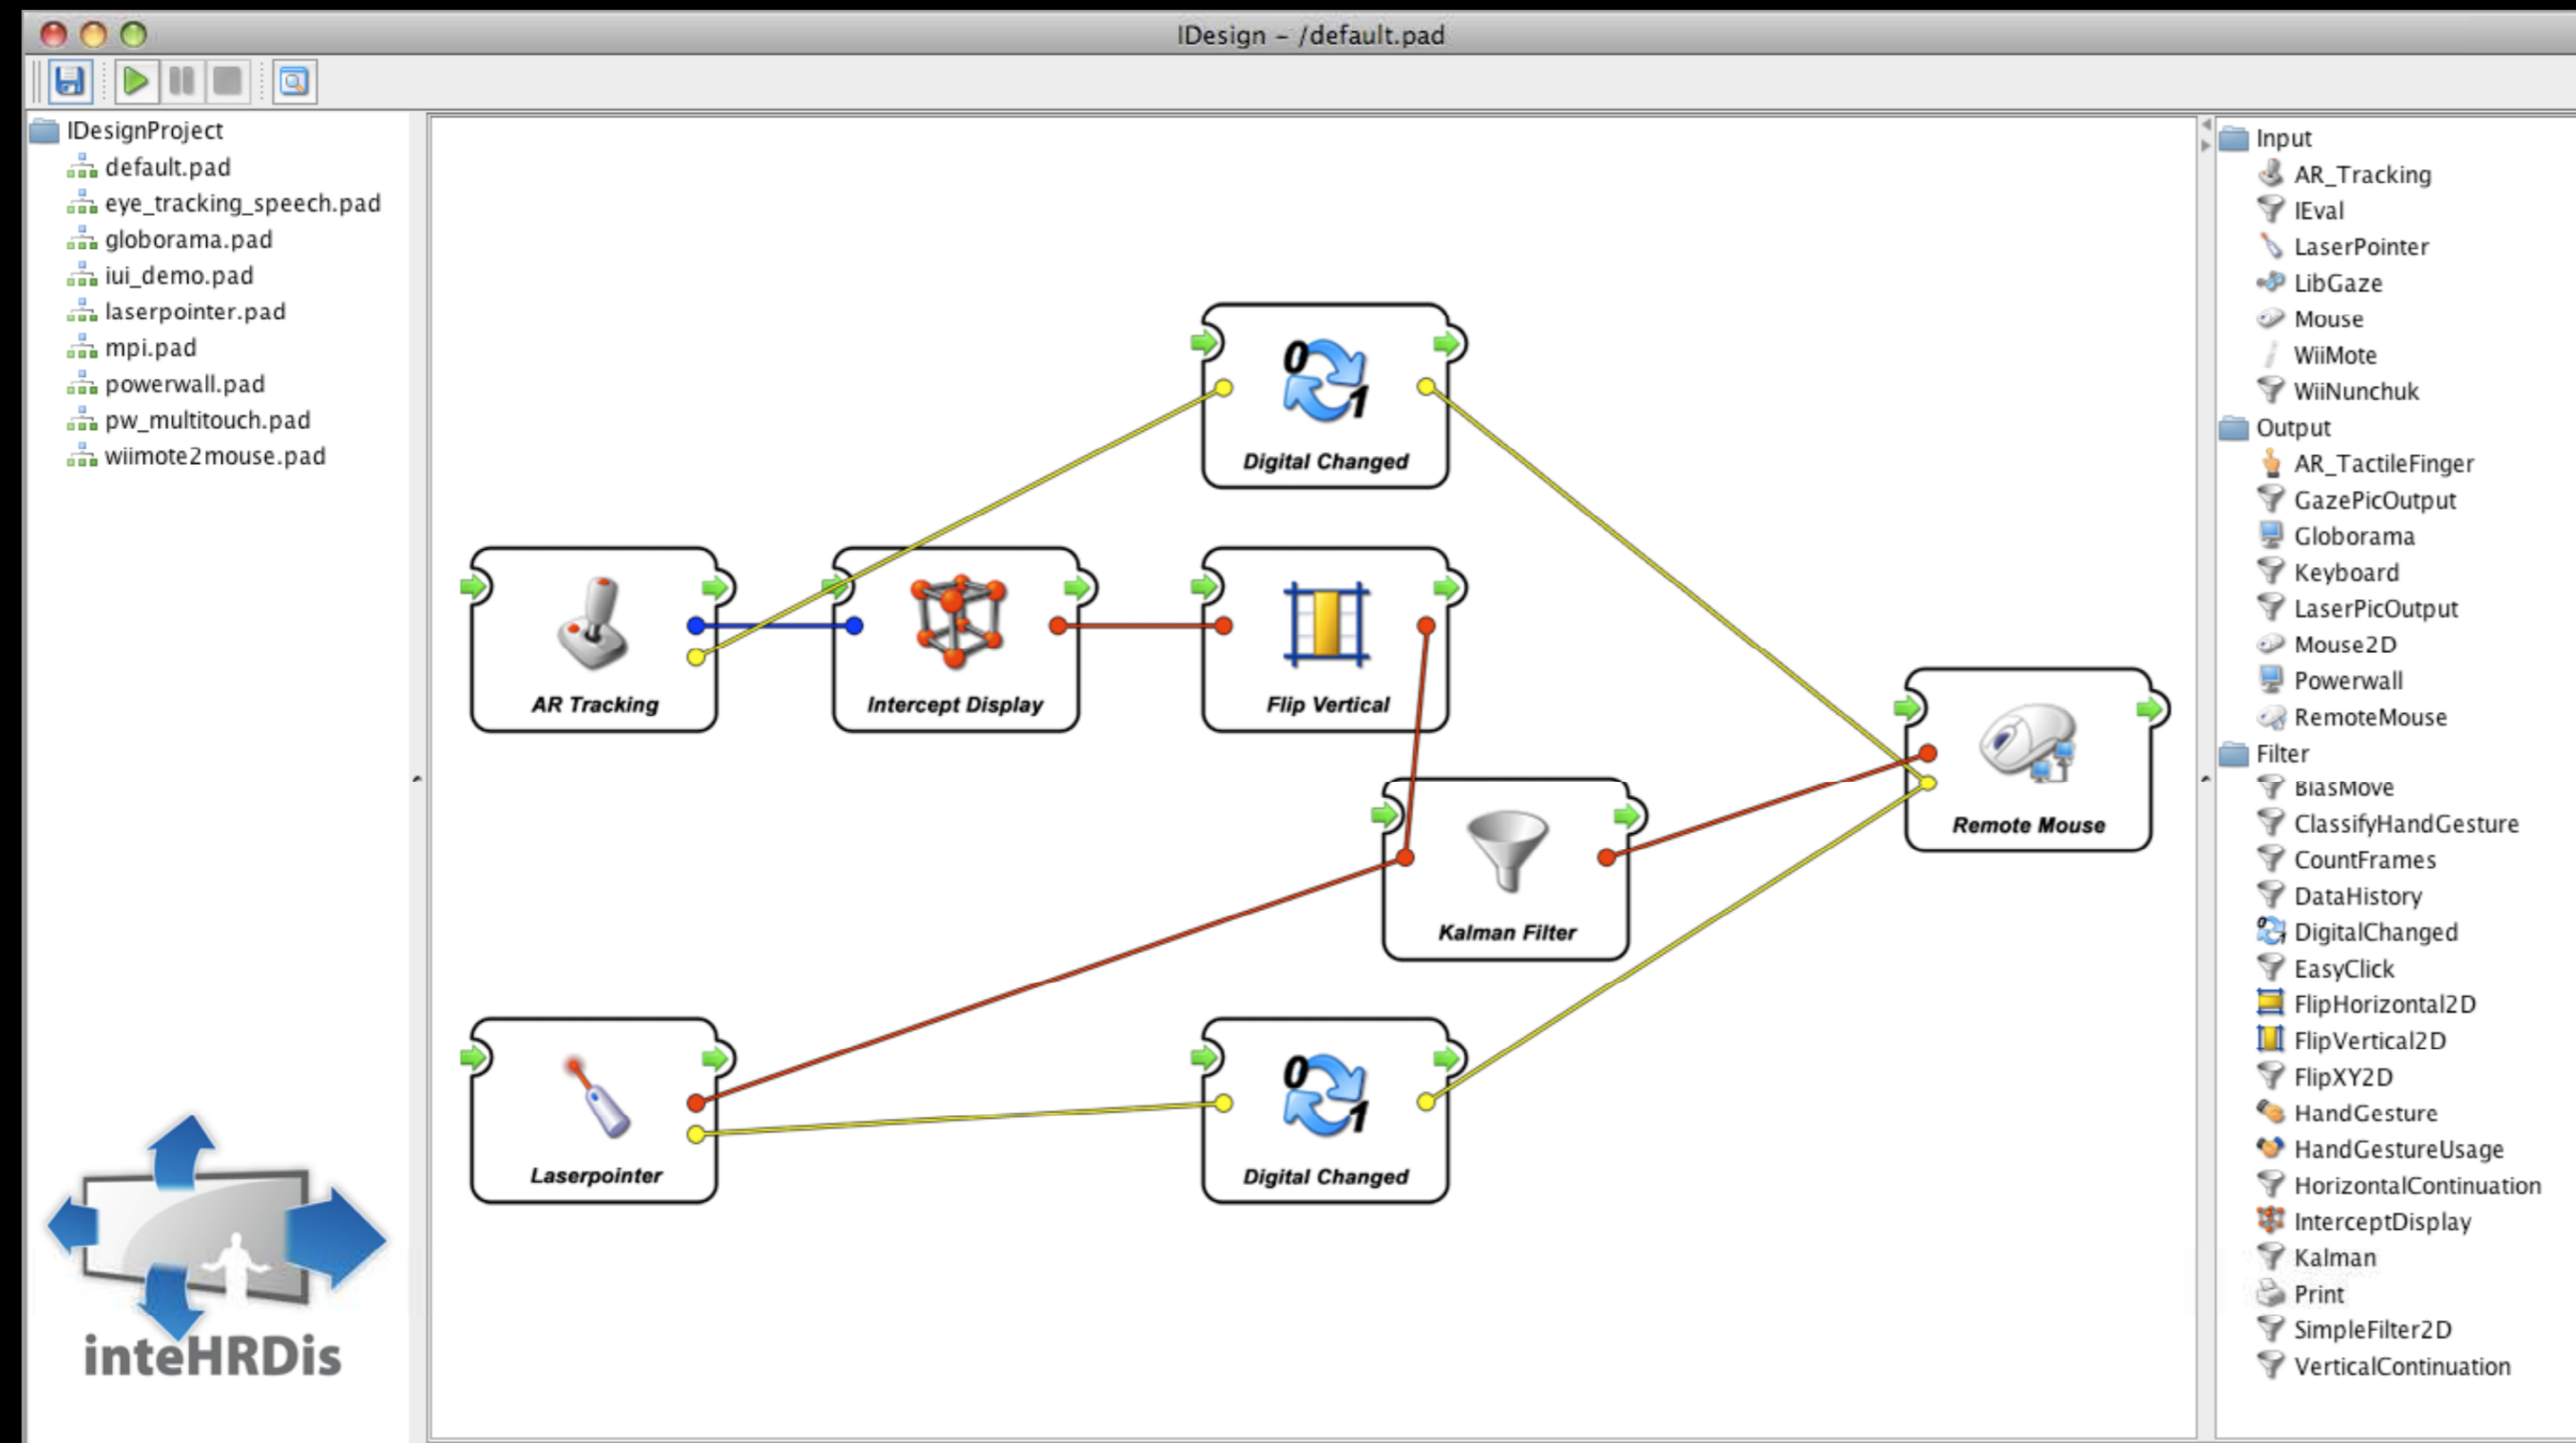

Squidy – Conceptual Architecture

Design Objectives

- Common interaction library
 - Generalization of input data & interaction tasks
 - Filter techniques as reusable components
 - Support of multi-modality and collaboration
- Standardized & individual interfaces:
 - Client-Server Architecture based on Dataflow
 - Device Interface: TUIO/OSC, TCP/IP, UDP, JNI
 - Vis Interface: Squidy API or mouse/keyboard emulation
- Interactive, visual configuration
 - Covers whole design lifecycle of input devices
 - Fast & interactive prototyping for industry and scientific research

Squidy – User Interface Concept

Design Approach

- Interactivity
 - Visual configuration at run-time
 - Direct Manipulation & Semantic Zooming
 - On-the-fly compilation
 - Multi-modality & Collaboration
- Reusability
 - Independent components, multiple instances
- Scalability
 - Multi-Threading, Client-Server Architecture
- Immediacy
 - High throughput, minimal lag (< 25ms*)
- Support of different user roles
 - Interaction Designer / Researcher
 - Programmer

* Lag as a determinant of human performance in interactive systems, MacKenzie, I. S. and Ware, C., CHI'93.

Conclusion

- Generalization of input devices and filter techniques in a common interaction library
- Interactive, visual configuration by semantic zooming and direct manipulation
- Applied with diverse input devices (e.g. Laserpointer-Interaction) at diverse events (e.g. ZKM PanoramaFestival, Ideenpark 2008) and at different groups (e.g. HMI Twente, MPI Tübingen, ZKM Karlsruhe)
- TODO:
 - Refinement of user interface concept
 - Formative evaluation study with Squidy
