Open Science

OPEN SCIENCE IN BULGARIA

The open access to scientific information initiative is directly correlated with national strategic priorities in the field of science and innovation.

The Implementation plan for the National strategy for the development of the scientific research 2017 – 2030 and the National concept for open access to scientific information provide analysis of the tendencies in the development of the initiative and outline essential steps, actions and prerequisites for the transition towards open science.

The Bulgarian Portal for Open Science is a building block of the initiative. It is maintained by the National Centre for Information and Documentation under art. 2, par. 24 of the Statutes of NACID and in compliance with Commission recommendation (EU) 2018/790 of 25 April 2018 on access to and preservation of scientific information.

The Bulgarian Portal for Open Science aims to coordinate the dissemination of open access scientific results from publicly funded research and fosters the efforts of all scientists that wish to share their research outputs.

The main purpose of the initiative is to provide faster and seamless sharing of publications and other digital research outputs and thus strengthen the communication and collaboration between scientists. The initiative aims to open opportunities for new levels of integration and raise awareness in order to build a global, sustainable and cooperative Open Science.

OPEN SCIENCE AS A GLOBAL INITIATIVE

Detailed information about the genesis, trends in the development, the main principles and the added value of the Open science initiative on European and global scale can be found in the following [Open Science Summary](#).
